A few causes of climate change:
- Deforestation
- Automobile, industrial and household air pollution
- Overcutting trees

Some impacts of climate change:
- Increasing frequent and severe flooding
- Increasing hunger and food insecurity
- Higher risk of landslide
- Increasing number of water borne diseases
- Drop in agricultural yield
- Increasing number of bush fires
- Destruction of arable land
- Disruption of agricultural calendar
- Sudden temperature change
- Dust storm and haze
- The advance of the desert
- Increasing poverty
- Bush fire
- Drought
- Floods

Some adaptation and mitigation measures:
- Plant season friendly species
- Avoid deforestation and carry out reforestation
- Respect basic hygiene rules
- Avoid industrial, automobile and household air pollution
- Promote and use renewable energy (solar, wind energy...)
- Remain updated with forecast information
- Fight against anarchical urbanisation
- Give priority to early maturing species of crops
- Adopt environment friendly practices
- Reforestation
- Keeping animals in enclosures
- Overcutting trees
- Automobile air pollution

A few causes:
- Deforestation
- Automobile, industrial and household air pollution
- Overcutting trees
The climate is affected:
Let's take action now to strengthen our capacity to adapt.
